An interoperability connection is a user-created link to one or more data sources that is managed in the Catalog tree as a single direct-read dataset.. The Data Interoperability toolbox contains out-of-the-box geoprocessing conversion tools that import and export data between geodatabase and nonnative formats using FME readers and writers.. You can also use conversion tools in the Data Interoperability toolbox to read WFS services and read and write GML-SF datasets. [INVITATION download link](#)
